

COVID-19 UPDATE

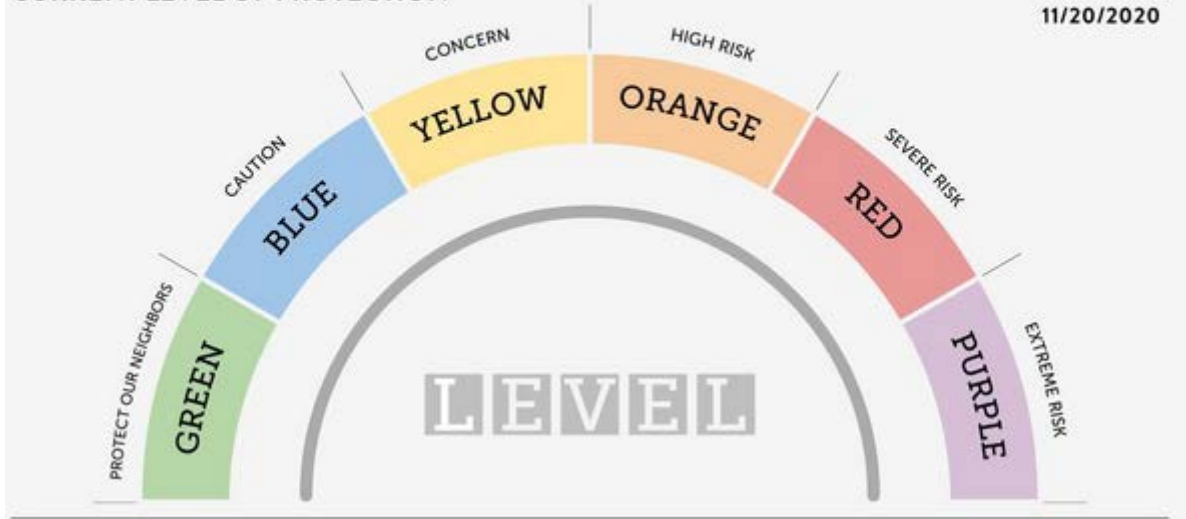

**City Council Regular Meeting
11/23/2020**

STATUS DIAL

CURRENT LEVEL OF PROTECTION

Effective date:
11/20/2020

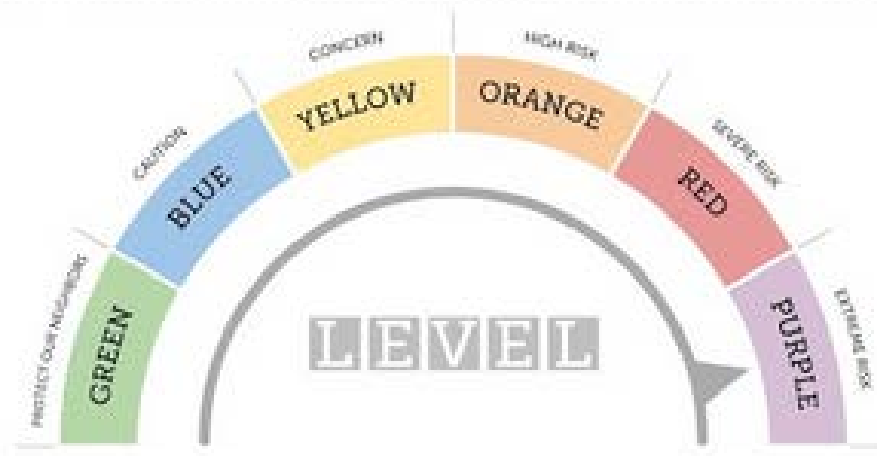

What determines your county's level of protection?

- **Percent of positive cases:** percent of tests that come back positive out of the total number of tests performed. The global standard to ensure that we are doing enough testing is a percent positivity of less than 5%
- **Amount of cases in a two-week period:** The 2-week incidence, per 100,000 populations helps us understand how much the virus is circulating in a community.
- **Stable or declining hospitalizations:** One of our key goals is to ensure that every person who needs hospital care can receive it. Stable is defined as no greater than 25% increase in a county's referral hospitals or no more than 2 new hospital admissions with COVID-19 on a single day, in the past 14 days.

LEVEL PURPLE

EXTREME RISK

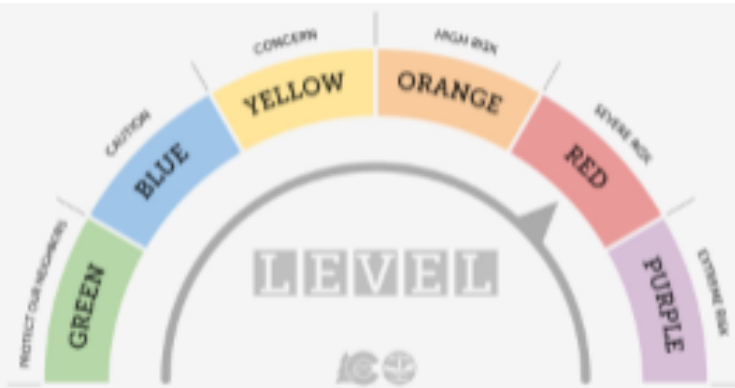

Does your county qualify for this level?

Hospital capacity risks have been breached, which may be indicated by:

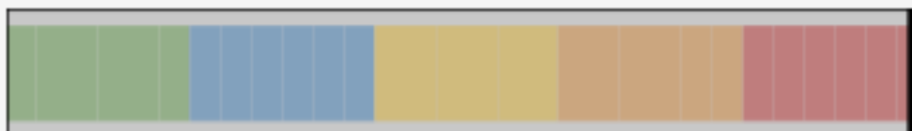

- Approaching the need for medical crisis standards of care
- Utilizing alternative care sites
- Critical shortages of PPE or staff
- Hospitals approaching 90% of their reported surge capacity

As of 4pm 11/23/2020

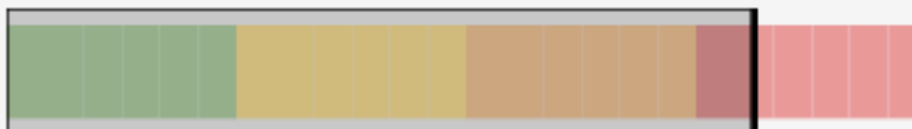

Counties will move between levels based on the metrics and will work with the state to ensure unique local factors are considered. In order to move to a less restrictive level (e.g., Level 2 to Level 1), counties must meet and sustain all three metrics for two weeks. Counties must engage in a consultation process with CDPHE, which may entail moving to a more restrictive level, when they are out of compliance with any of the metrics for more than two weeks.

Adams County Two-Week Cumulative Incidence: 1,411

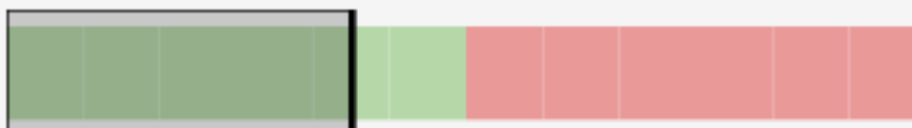

>175-350

Adams County Two-Week Average Positivity: 15.7%

>15%

9 Days of Declining or Stable Hospitalizations in Adams County
